Arctic Trailer Customer Safety Guidance

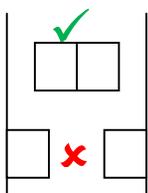

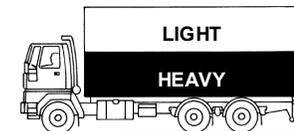

Dimensions H – 4.4m, W – 2.5m, L – 13.710m
 (Average payload weights 25.840t).

Perry's drivers are instructed to obey customer's site safety rules. If there are any special instructions, please inform the driver or advise Perry's office.

Please ensure that when Perry's drivers are attending your site there are no pedestrians or obstacles in their way. Personnel must stand well clear and within full view of the driver at all times. Please do not allow your personnel to climb onto the trailers provided. This is both dangerous and unnecessary.

In order to achieve maximum vehicle stability the load should be placed so that the centre of gravity is kept as low as practicable and near to the vehicle's centre line. This means that, where possible:

The load should be spread to give an even weight distribution over the whole floor area . it is especially important that both sides are evenly weighted

When a load is stacked the larger / heavier items should be placed at the bottom

Note that it is easier to prevent a load from moving in the first place than to stop it once it has started moving, thus the load must be restrained in such a way that no part of it can move in any direction relative to the vehicle.

Perry's drivers must be provided with adequate space to exchange the trailer. Also ensure that vehicles, goods or pallets etc. do not block access to the trailer when a collection has been arranged.

Customers are asked to ensure that the trailers are only used for the purpose they are supplied for: i.e. cardboard, paper, polythene, wood, security destruction as stated in the service level agreement. Any contamination such as rubbish, or any other material not previously agreed must not be placed in this trailer, without driver or office approval.

Any trailer with defects must be reported to the driver, who will fill out a defect sheet for remedial action to be taken.
